

## DOMESTIC CCTV INSTALLATION PRICE LIST APRIL 2019

Prices to supply and install professional range Hikvision CCTV Systems. The recorder units are installed in an agreed secure location with the option of expansion to a total of 4 (8, 16 with upgrade) cameras. These Systems can be connected to the internet for remote view and playback on a PC, Smartphone and or Tablet (Android, Apple & PC Windows and Mac).

We now only supply and install full High Definition Hikvision cameras starting at 1080p resolution. Our entry level system uses the Hikvision Turbo analogue HD which offers excellent results and picture quality for the cost. Our higher specification systems (option 2-4) use the more advanced, higher specification IP network cameras which are fully digital and available in higher resolution and frame rate than Turbo HD and offer superior performance and quality. Please call us or see our website for further information.
